"The Company to use for all your electrical work"

Welcome to another great year of personal and career opportunities!

How were your Christmas and New Year celebrations? Hopefully you managed to get some relaxation time in amongst all the activities which go on at that time of year. We at AWE certainly enjoyed the 2 weeks we took off to get our minds off work! But we're right back into it again for another fantastic year and we hope you are too.

**HOME AND BUILDING OWNERS
MUST READ THIS**

Recent changes brought in by the Office of Fair Trading and Energy Australia now mean that before we can connect any new electrical wiring or fittings, we must carry out thorough tests on the existing electrical installation.

The point behind this is as follows:

Currently we as electricians do not know the integrity of your existing cabling (especially if we didn't wire it initially). So by adding additional cabling for those extra lights or power points, we are in affect connecting to a source with an unknown degree of safety. Therefore we must now test this existing wiring as well as our own new wiring.

THE UPSIDE FOR YOU:

By carrying out more thorough tests, it will provide you with a greater level of security and peace of mind that you know your wiring is in good condition. It should clearly identify any unsafe issues which can then be repaired immediately to make sure your home or workplace is safe.

We will require a little extra time on jobs in order to carry out the thorough testing process. Naturally we will inform you throughout your job as to any issues we discover.

The Process:

As we are still working out the best, most cost effective way to do this for you, we are not set on a specific method or cost as yet. Currently our most preferred method involves testing the necessary circuit/s before we carry out the work you have requested. This way you will know exactly how long we have spent on the testing and if any faults are discovered then we can repair them before installing any new cabling. This way you are able to monitor the costs more closely. Please note that we are only required to test the circuits that we will be working on (as a minimum), however we are able to test your entire installation while we are there if you would like us to.

Every electrician should be complying with these changes. At AWE we are, which re-enforces our vision to be

"The Company" to use for all your electrical work".

*** SPECIAL OFFER ***

Now, because AWE values getting repeat business from you guys, we are offering a great special as a way for us to see you again. Any job initiated and paid for in full between 19 March 2007 and 5 May 2007 we will give you a **MASSIVE DISCOUNT!**

If you spend over **\$250.00** in labour on a single job, we will then give you **\$50.00 OFF** that invoice.

However, if you need a larger amount of work done and you spend over **\$1500.00** in labour on a single job, we will then give you **\$300.00 OFF** that invoice.

WOW! That's an AWESome offer!

Be sure to mention this offer when you call

** Amounts shown are exclusive of GST and do not include material or service call costs.*

As Tim Shaw says, "But wait there's more..." We have another offer for you which we'll touch on later.
